PROJECTS

E-commerce Store (Web site project in semester):

Developed web application with the team of two. This application consist of sign up, login, home, and products pages. When user log in, its name displayed at home page. The end-user can see the product. There is also an admin page where admin can add, delete, edit the products, and can manage the profiles.

Library management system:

This was a project semester project and was developed in MS Access. It has several functions such as add book, delete book, edit book, search book, profile edit, and etc.

Online Trusted Medical Network (OTMN):

This is basically a web app, developed in Angular4, node.js and MySQL using xamp server app. A group of four was divided into two teams: one was back-end and other was front-end team, I was in front-end. Additionally, this is developed to facilitate medical organizations. The main function of app is secure registration and login system, doctor to patient and doctors Communication, Frontend Dashboard for doctors, patient, hospital staff, and pharmacies.
